PROFESSIONAL WORK

Postdoctoral Research Fellow, University of Exeter, 2019-

- Creation of software pipeline for cross-matching external photometric catalogues to LSST datasets as part of LSST:UK consortium
- Analysis of preliminary LSST datasets to ensure statistical robustness and correct for potential effects in datasets for scientific application
- Awarded STFC grant

Postdoctoral Researcher, Space Telescope Science Institute, 2018-2019

- Analysis and optimisation of supernovae survey for future WFIRST observing strategies
- Involved solving maximisation problem of information content analysis, and robust statistical analysis of the fitting and modelling of supernovae lightcurves
- Software development for `photutils`, an `astropy`-affiliated python package, focussing on analysis tools for PSF photometry

EDUCATION

PhD in Physics, University of Exeter, 2013-2018 — Supervisor: Prof. Tim Naylor

- Explored the effects of blended stars on the astrometric and photometric properties of stars in crowded Galactic fields
- Characterisation of photometric catalogues by angular resolution and survey completeness explored, allowing for quantitative comparisons of the crowding suffered
- Analysed the effect crowding has on the *WISE* catalogue
- Awarded STFC PhD Studentship

Master's Dissertation, University of Exeter, 2012-2013 — Supervisor: Prof. Tim Naylor

- Analysis of young stellar cluster ages using the radiative-convective gap as a distance and extinction independent variable
- Analysis of the initial mass function, exploring effects of age/distance on masses in stellar clusters
- Characterised the effect the choice of magnitudes used in a colour-colour diagram has on the interstellar extinction-age dependency, determining the optimal CCD for age independent extinction derivations for low mass young pre-main-sequence stars

College Summer Internship, University of Exeter, 2012 — Supervisor: Dr Jennifer Hatchell

- Work on the construction of temperature and dust β maps from JCMT 450μm and 850μm observations, supplemented with *Herschel* data, and analysis of NGC1333

MPhys in Physics with Astrophysics, First Class Honours, University of Exeter, 2009-2013

SOFTWARE ENGINEERING

Developer for the `astropy` `photutils` package

- 8th highest contribution (2nd highest 2018-2020) to the community-driven, open source software
- Code tests and feature improvements, package maintenance and distribution, and documentation development

Lead developer of the `macauff` python package

- Development of computationally efficient and precise codebase to ensure accurate photometry and astrometry can be obtained for a set of cross-matched photometric catalogues
- Writing entire project end-to-end, including creation of continuous integration suite, documentation, and class-based python and fortran code

Other project highlights:

- Code for simulations of WFIRST supernovae lightcurves and characterisation efficiency
- Improvements to data reduction for JCMT observations, and writing of key data analysis pipeline

Main programming strengths: python (`numpy`, `scipy`, `astropy`, `matplotlib`), fortran (`openmp`), statistical analysis and application

SCIENTIFIC TALKS & CONFERENCES

July 2019, Python in Astronomy 19, Contributed Talk
June 2019, STScI, HotSci@STScI Colloquia, Contributed Seminar Talk
March 2019, STScI, Friday Science Coffee, Contributed Seminar Talk
February 2019, STScI, TESS Data Workshop, Contributed Talk
February 2019, UNLV BUFFALO 2019 Meeting, Contributed Talk
May 2018, Exeter, First Year PhD Development Day, Invited Talk
March 2018, Science with Precision Astrometry, Contributed Poster
September 2017, Cardiff Star Formation Workshop, Contributed Talk
July 2016, NASA Goddard Space Flight Center, Invited Seminar Talk
June 2016, Cool Stars 19, Contributed Poster
April 2015, BECSS Bristol, Contributed Talk
March 2015, Milky Way Astrophysics from Wide-Field Surveys, Contributed Talk

TEACHING & OUTREACH EXPERIENCE

Undergraduate Astrophysics Lab Demonstrator, 2013-2017

- Assist in teaching of 20-30 second year undergraduates in the astrophysics portion of the lab
- Demonstrated use of UNIX commands, IRAF, data reduction and analysis, & report writing
- Duties included report assessment and feedback
- Experiments included analysis of Cepheid variability periods, colour-magnitude diagrams, and optical spectroscopy

Undergraduate Astrophysics Teaching Telescope Operator, 2013-2017

- Lead undergraduate students in usage of the university's teaching telescope
- Teaching of telescope operation, as well as remote/automated capacities of ACP Scheduler
- Involved teaching an understanding of observation planning

Undergraduate Physics Problem Tutor, 2013-2017

- Assist in running first year undergraduate physics problems classes
- Involved organising homework sessions, managing approximately 140 students
- Provided guidance on a wide variety of problems, ranging from solid state physics to electromagnetism to astrophysics

"Pint of Science" Event Organiser, 2013-2018

- Co-organised the "Pint of Science" outreach events held in Exeter each year
- Events involve three nights of outreach talks from a selection of researchers, aimed at public engagement
- Included a host of responsibilities including deciding the themes for each nights' talks, inviting speakers, and organising event location
- Involved engaging with the community and answering questions from members of the public

Observing At the James Clerk Maxwell Telescope, Hawaii, 2014

- Experience at the JCMT as part of the JPS survey
- Involved telescope operation, data processing, and observation scheduling
